

January 13, 1981

Memo to File:

RE: Continental Lime, Inc.
Cricket Mountain
Lime Plant Quarry
ACT/027/006
Millard County

This active operation was visited on January 8, 1981, by Cleon Feight and Jim Smith. Ben Sheldon, the quarry foreman, accompanied them on a short tour of the quarry and briefly explained the operation. Drilling and blasting was being conducted on the lower area adjacent to the shop so that rock would still be available during time of inclement weather when the steep access road to the upper bench would not be utilized. A temporary shut down of the upper quarry bench was currently in effect due to equipment breakdown. Overall, the operation appears to be going according to their mining and reclamation plan and looks good. Production is approximately 1,500 tons per day and is shipped to U. S. Steel and Kennecott, among others.
